## <<新生儿疼痛>>

### 内容概要

Little attention has in the past been given to physiological or pathological responses of the infant to stimuli that produce pain in older individuals. All that has changed. Drs. Anand and McGrath have joined in writing and editing this collection of chapters on many aspects of nociception and the responses within the central nervous system, behavioral responses, endocrine, cardiovascular and immune functions. The question of the benefits of some pain to communicate the presence of a potentially dangerous event is the subject of a thoughtful discussion in Chapter 4. Nociception may trigger appropriate physiological responses. However, severe responses may in themselves be deleterious as documented by the improved outlook when they are blocked during surgery. The principles and pharmacotherapy with systemic analgesic drugs (especially opioids) is given extensive and informative consideration in Chapters 5 and 6. Regional and topical ane.

书籍目录

Preface to the First Edition, by M.E.Avery  
Dedication  
Acknowledgements  
List of contributors  
Chapter 1. An overview of neonatal pain  
Chapter 2. Development of the peripheral and spinal pain system  
Chapter 3. Development of supraspinal pain processing  
Chapter 4. Long-term consequences of pain in human neonates  
Chapter 5. Behavioral and neuroendocrine consequences of neonatal stress  
Chapter 6. Pain assessment in neonates  
Chapter 7. Pharmacokinetics and pharmacodynamics of analgesic drugs  
Chapter 8. Systemic analgesic therapy  
Chapter 9. Regional anesthesia and analgesia  
Chapter 10. Environmental and behavioral strategies to prevent and manage neonatal pain  
Chapter 11. Fetal pain and stress  
Chapter 12. The ethics of pain control in neonates and infants  
Chapter 13. Neonatal pain in a social context  
Chapter 14. Evidence-based decision making, systematic reviews and the Cochrane collaboration: implications for neonatal analgesia  
A. Ohlsson, A. Taddio, A.R. Jadad and B.J. Stevens
