## 内容概要

Lyn Talbot and Glenda Verrinder Promoting Health: The Primary Health Care Approach, 3rd edition, is a practical resource which helps health care workers provide accessible and socially sensitive health services. The text introduces a range of approaches to health promotion from individual interventions to social change initiatives, and these form the basis for discussion and examples throughout. An accessible and practical text, Promoting Health draws on current global and local issues and practice, and provides a sound practical and theoretical response. Promoting Health builds on the sound philosophical approach of the previous editions. It has been thoroughly updated for public health students, educators and professionals who are increasingly being required to address the health challenges arising from changing social and environmental factors. About the authors Lyn Talbot and Glenda Verrinder continue the work of Andrea Wass as the new authors of this third edition of Promoting Health: The Primary Health Care Approach. Lyn and Glenda both teach at La Trobe University's School of Health and Environment, and together bring over 40 years' experience in community and public health and nursing to this best-selling text.
