

<<稀薄气体的数学理论 (影印版) >>

图书基本信息

书名：<<稀薄气体的数学理论 (影印版) >>

13位ISBN编号：9787040255355

10位ISBN编号：7040255359

出版时间：2009-2

出版时间：高等教育出版社

作者：切尔奇纳尼 编

页数：317

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

前言

为了更好地借鉴国外数学教育与研究的成功经验,促进我国数学教育与研究事业的发展,提高高等学校数学教育教学质量,本着“为我国热爱数学的青年创造一个较好的学习数学的环境”这一宗旨,天元基金赞助出版“天元基金影印数学丛书”。

该丛书主要包含国外反映近代数学发展的纯数学与应用数学方面的优秀书籍,天元基金邀请国内各个方向的知名数学家参与选题的工作,经专家遴选、推荐,由高等教育出版社影印出版。

为了提高我国数学研究生教学的水平,暂把选书的目标确定在研究生教材上。

当然,有的书也可作为高年级本科生教材或参考书,有的书则介于研究生教材与专著之间。

欢迎各方专家、读者对本丛书的选题、印刷、销售等工作提出批评和建议。

<<稀薄气体的数学理论（影印版）>>

内容概要

本书讲述了稀薄气体的数学理论（ Boltzmann方程的数学理论 ）中的三个主要问题直到1994年的理论发展，包括Boltzmann方程是怎样从经典力学推出来的，即Boltzmann方程是怎样从Liouville方程推出来的； Boltzmann方程解的存在性和唯一性问题； Boltzmann方程与流体力学的关系，即Euler方程和Navier-Stokes方程是怎样从Liouville方程推出来的。

另外，本书还介绍了O.Lanford III， DiPerna， P.L.Lions等的出色工作，可作为Boltzmann方程的数学理论的优秀教材和参考书。

作者简介

编者：(意大利)切尔奇纳尼(Cereignani,C.)

书籍目录

Introduction 1 Historical Introduction 1.1 What is a Gas? From the Billiard Table to Boyle's Law 1.2 Brief History of Kinetic Theory 2 Informal Derivation of the Boltzmann Equation 2.1 The Phase Space and the Liouville Equation 2.2 Boltzmann's Argument in a Modern Perspective 2.3 Molecular Chaos. Critique and Justification 2.4 The BBGKY Hierarchy 2.5 The Boltzmann Hierarchy and Its Relation to the Boltzmann Equation 3 Elementary Properties of the Solutions 3.1 Collision Invariants 33 3.2 The Boltzmann Inequality and the Maxwell Distributions 3.3 The Macroscopic Balance Equations 3.4 The H-Theorem 3.5 Loschmidt's Paradox 3.6 Poincare's Recurrence and Zermelo's Paradox 3.7 Equilibrium States and Maxwellian Distributions 3.8 Hydrodynamical Limit and Other Scalings 4 Rigorous Validity of the Boltzmann Equation 4.1 Significance of the Problem 4.2 Hard-Sphere Dynamics 4.3 Transition to L1. The Liouville Equation and the BBGKY Hierarchy Revisited 4.4 Rigorous Validity of the Boltzmann Equation 4.5 Validity of the Boltzmann Equation for a Rare Cloud of Gas in the Vacuum 4.6 Interpretation 4.7 The Emergence of Irreversibility 4.8 More on the Boltzmann Hierarchy Appendix 4.A More about Hard-Sphere Dynamics Appendix 4.B A Rigorous Derivation of the BBGKY Hierarchy Appendix 4.C Uchiyama's Example 5 Existence and Uniqueness Results 5.1 Preliminary Remarks 5.2 Existence from Validity, and Overview 5.3 A General Global Existence Result 5.4 Generalizations and Other Remarks Appendix 5.A 6 The Initial Value Problem for the Homogeneous Boltzmann Equation 6.1 An Existence Theorem for a Modified Equation 6.2 Removing the Cutoff: The L1-Theory for the Full Equation 6.3 The L¹-Theory and Classical Solutions 6.4 Long Time Behavior 6.5 Further Developments and Comments Appendix 6.A Appendix 6.B Appendix 6.C 7 Perturbations of Equilibria and Space Homogeneous Solutions 7.1 The Linearized Collision Operator 7.2 The Basic Properties of the Linearized Collision Operator 7.3 Spectral Properties of the Fourier-Transformed, Linearized Boltzmann Equation 7.4 The Asymptotic Behavior of the Solution of the Cauchy Problem for the Linearized Boltzmann Equation 7.5 The Global Existence Theorem for the Nonlinear Equation 7.6 Extensions: The Periodic Case and Problems in One and Two Dimensions 7.7 A Further Extension: Solutions Close to a Space Homogeneous Solution 8 Boundary Conditions 8.1 Introduction 8.2 The Scattering Kernel 8.3 The Accommodation Coefficients 8.4 Mathematical Models 8.5 A Remarkable Inequality 9 Existence Results for Initial-Boundary and Boundary Value Problems 9.1 Preliminary Remarks 9.2 Results on the Traces 9.3 Properties of the Free-Streaming Operator 9.4 Existence in a Vessel with Isothermal Boundary 9.5 Rigorous Proof of the Approach to Equilibrium 9.6 Perturbations of Equilibria 9.7 A Steady Problem 9.8 Stability of the Steady Flow Past an Obstacle 9.9 Concluding Remarks 10 Particle Simulation of the Boltzmann Equation 10.1 Rationale and Overview 10.2 Low Discrepancy Methods 10.3 Bird's Scheme 11 Hydrodynamical Limits 11.1 A Formal Discussion 11.2 The Hilbert Expansion 11.3 The Entropy Approach to the Hydrodynamical Limit 11.4 The Hydrodynamical Limit for Short Times 11.5 Other Scalings and the Incompressible Navier-Stokes Equations 12 Open Problems and New Directions Author Index Subject Index

章节摘录

插图：As early as 1738 Daniel Bernoulli advanced the idea that gases are formed of elastic molecules rushing hither and thither at large speeds, colliding and rebounding according to the laws of elementary mechanics. Of course, this was not a completely new idea, because several Greek philosophers asserted that the molecules of all bodies are in motion even when the body itself appears to be at rest. The new idea was that the mechanical effect of the impact of these moving molecules when they strike against a solid is what is commonly called the pressure of the gas. In fact if we were guided solely by the atomic hypothesis, we might suppose that the pressure would be produced by the repulsions of the molecules. Although Bernoulli's scheme was able to account for the elementary properties of gases (compressibility, tendency to expand, rise of temperature in a compression and fall in an expansion, trend toward uniformity), no definite opinion could be passed on it until it was investigated quantitatively. The actual development of the kinetic theory of gases was, accordingly, accomplished much later, in the nineteenth century.
