

<<紧复曲面>>

图书基本信息

书名：<<紧复曲面>>

13位ISBN编号：9787510033018

10位ISBN编号：7510033012

出版时间：2011-4

出版时间：世界图书出版公司

作者：Wolf P.Barth,Klaus Hulek,Chris A.M.Peters

页数：436

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## &lt;&lt;紧复曲面&gt;&gt;

## 内容概要

本书是一部非常好的学习代数曲面的书，提供了复曲面分类的复解析方法。此书是从复代数几何角度研究复曲面的大全类书籍，从初等入门到高深前沿都有涉及。这本书是经典中的经典，讲的是代数曲面的各种专题，每个章节都写的无限完美。内容包括曲面里的曲线，相交数，霍奇分解，projectivity，有理曲面分类，Kodaira分类，general 曲面，K3&Enrique曲面。

此书新版的最后两章写的尤其好，一是 K3 曲面；另一个是 Donaldson 和 Seiber Witten 理论，后者是来自模空间的不变量理论，都是现在热门的专题。

有位读者这么说：“可以说如果学代数几何没念过这本书，甚至是学几何没念过《紧复曲面(第2版)》，可以考虑换行，是百年难得一见的好书。

“可见《紧复曲面(第2版)》书在该领域具有举足轻重的地位。

## 书籍目录

introduction  
 historical note  
 the contents of the book  
 standard notation  
 i.preliminaries  
 topology and algebra  
 1.notation and basic facts  
 2.some properties of bilinear forms  
 3.vector bundles, characteristic classes and the index theorem  
 complex manifolds  
 4.basic concepts and facts  
 5.holomorphic vector bundles, serre duality and riemann-roch  
 6.line bundles and divisors  
 7.algebraic dimension and kodaira dimension  
 general analytic geometry  
 8.complex spaces  
 9.the a-process  
 10.deformations of complex manifolds  
 differential geometry of complex manifolds  
 11.de rham cohomology  
 12.dolbeault cohomology  
 13.kaihler manifolds  
 14.weight-1 hodge structures  
 15.yau's results on kaihler-einstein metrics  
 coverings  
 16.ramification  
 17.cyclic coverin  
 18.covering tricks  
 projective-algebraic varieties  
 19.gaga theorems and projectivity criteria  
 20.theorems of bertini and lefschetz  
 ii.curves on surfaces  
 embedded curves  
 1.some standard exact sequences  
 2.the picard-group of an embedded curve  
 3.piemann-roch for an embedded curve  
 4.the residue theorem  
 5.the trace map  
 6.serre duality on an embedded curve  
 7.the a-process  
 8.simple singularities of curves  
 intersection theory  
 9.intersection multiplicities  
 10.intersection numbers

<<紧复曲面>>

- 11.the arithmetical genus of an embedded curve
- 12.1-connected divisors
- iii.mappings of surfaces
- bimeromorphic geometry
- 1.bimeromorphic maps
- 2.exceptional curves
- 3.rational singularities
- 4.exceptional curves of the first kind
- 5.hirzebruch-jung singularities
- 6.resolution of surface singularities
- 7.singularities of double coverings, simple singularities of surfaces
- fibrations of surfaces
- 8.generalities on fibrations
- 9.the n-th root fibration
- 10.stable fibrations
- 11.direct image sheaves
- 12.relative duality
- the period map of stable fibrations
- 13.period matrices of stable curves
- 14.topological monodromy of stable fibrations
- 15.monodromy of the period matrix
- 16.extending the period map
- 17.the degree of  $f = x/s$
- 18.iitaka's conjecture  $c_{2,1}$
- iv.some general properties of surfaces
- 1.meromorphic maps, associated to line bundles
- 2.hodge theory on surfaces
- 3.existence of kahler metrics
- 4.deformations of surfaces
- 5.some inequalities for hodge numbers
- 6.projectivity of surfaces
- 7.the nef cone
- 8.surfaces of algebraic dimension zero
- 9.almost-complex surfaces without any complex structure
- 10.bogomolov's theorem
- 11.reider's method
- 12.vanishing theorems on surfaces
- v.examples
- some classical examples
- 1.the projective plane  $p^2$
- 2.complete intersections
- 3.tori of dimension 2
- fibre bundles
- 4.ruled surfaces
- 5.elliptic fibre bundles
- 6.higher genus fibre bundles

<<紧复曲面>>

elliptic fibrations

7.kodaira's table of singular fibres

8.stable fibrations

9.the jacobian fibration

10.stable reduction

11.classification

12.invariants

13.logarithmic transformations

kodaira fibrations

14.kodaira fibrations

finite quotients

15.the godeaux surface

16.kummer surfaces

17.quotients of products of curves

infinite quotients

18.hopf surfaces

19.inoue surfaces

20.quotients of bounded domains in  $\mathbb{C}$ :

21.hilbert modular surfaces

coverings

22.invariants of double coverings

23.an enriques surface

24.kummer coverings

vi.the enriques kodaira classification

1.statement of the main result

2.characterising minimal surfaces whose canonical bundle is nef

3.the rationality theorem and castelnuovo's criterion

4 the case  $a(x)=2$

5.the case  $a(x)=1$

6.the case  $a(x)=0$

7.the final step

8.deformations

vii.surfaces of general type

preliminaries

1.introduction

2.some general theorems

two inequalities

3.noether's inequality

4.the inequality  $c < 3c^2$

pluricanonical maps

5.the main results

6.proof of the main results

7.the exceptional cases and the 1-canonical map

surfaces with given chern numbers

8.the geography of chern numbers

9.surfaces on the noether lines

<<紧复曲面>>

- 10. surfaces with  $q = pg = 0$
- viii. k3-surfaces and enriques surfaces
- introduction
- 1. notation
- 2. the results
- k 3-surfaces
- 3. topological and analytical invariants
- 4. digression on affine geometry over  $\mathbb{F}_2$
- 5. the neron-severi lattice of kummer surfaces
- 6. the Torelli theorem for kummer surfaces
- 7. the local Torelli theorem for k3-surfaces
- 8. a density theorem
- 9. behaviour of the Kähler cone under deformations
- 10. degenerations of isomorphisms between k3-surfaces
- 11. the Torelli theorems for k3-surfaces
- 12. construction of moduli spaces
- 13. digression on quaternionic structures
- 14. surjectivity of the period map
- enriques surfaces
- 15. topological and analytic invariants
- 16. divisors on an enriques surface  $y$
- 17. elliptic pencils
- 18. double coverings of quadrics
- 19. the period map
- 20. the period domain for enriques surfaces
- 21. global properties of the period map special topics
- 22. projective k3-surfaces and mirror symmetry
- 23. special curves on k3-surfaces
- 24. an application to hyperbolic geometry
- ix. topological and differentiable structure of surfaces
- topology of simply connected compact complex surfaces
- 1. Freedman's results
- 2. representability of unimodular forms
- Donaldson invariants
- 3. introduction
- 4. the Donaldson invariant, a bird's eye view
- 5. infinitely many homeomorphic surfaces which are not diffeomorphic
- ..
- 6. further results obtained by the Donaldson method
- Seiberg-Witten invariants
- 7. introduction
- 8. properties of the invariants
- 9. surfaces diffeomorphic to a rational surface
- bibliography
- notation
- index
