章节摘录

The global energy crisis is approaching. What can we do ?

Here are some steps you can take. Cooling puts the greatest stress on your summer energy bill and the power grid. Just as tune-up for your car can improve your gas mileage , a yearly tune-up of your heating and cooling system can improve efficiency and comfort. Clean or replaces filters monthly or as needed. For central air conditioning systems and room air conditioners , look for the ENERGY STAR , the federal governments symbol for energy efficiency. For central air , purchase the system with the highest possible Seasonal Energy Efficiency Ratio (SEER) . Use energy-efficient ceiling fans either alone or with air conditioning. Ceiling fans do a great job of circulating air. When used with air conditioning , fans allow you to raise the thermostat and cut costs. Ceiling fans cool people , not rooms , so before you leave; turn off the ceiling fan.
