

<<微积分>>

图书基本信息

书名：<<微积分>>

13位ISBN编号：9787811059878

10位ISBN编号：7811059878

出版时间：2009-10

出版时间：中南大学出版社

作者：陈海波

页数：255

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

前言

Advanced Mathematics-Calculus is the first university mathematics course, and also one of the most important courses for science and engineering students in universities. In order to help students improve their English level and the ability to read English science references, and to make use of successful teaching experiences in Western countries, more and more universities in China have begun to use bilingual (generally Chinese and English) teaching method in classrooms. With the differences of course contents and teaching methods between China and Western countries, none seems to meet the teaching requirements set forth by the Ministry of Education of China, although many good English language calculus textbooks are available. This book is intended to serve as a text for the bilingual teaching course in calculus that is usually taken by first-year students who study science and engineering. This is a student textbook covering essential topics in calculus usually taught in the early stages of science and engineering students in China. The requirements of such students have influenced its content and presentation helped in many ways by the authors' long and continuous experience of teaching mathematical methods to various degree students in Central South University. It is divided into two volumes. The first volume contains Calculus of single variable and infinite series. The second volume consists of Calculus of multivariable with analysis geometrics and ordinary differential equations.

<<微积分>>

内容概要

This is a student textbook covering essential topics in calculus usually taught in the early stages of science and engineering students in China. The requirements of such students have influenced its content and presentation helped in many ways by the authors long and continuous experience of teaching mathematical methods to various degree students in Central South University. It is divided into two volumes. The first volume contains Calculus of single variable and infinite series. The second volume consists of Calculus of multivariable with analysis geometrics and ordinary differential equations.

书籍目录

Chapter 7 Analytic Geometry in Space and Vector Algebra 7.1 Vector and their linear operations 7.2 Rectangular coordinate systems in space and components of vectors 7.3 The scalar product vector product mixed product 7.4 Planes and their equations 7.5 Straight lines in space and their equations 7.6 Surfaces and their equations 7.7 Space curves and their equations 7.8 Quadric surfaces

Chapter 8 The Multivariable Differential Calculus and its Applications 8.1 Basic concepts of multivariable functions 8.2 Limit and continuity for function of several variables 8.3 Partial derivatives and higher-order partial derivatives 8.4 Total differentials 8.5 Directional derivatives and the gradient 8.6 Differentiation of multivariable composite functions 8.7 Differentiation of implicit functions 8.8 Applications of differential calculus of multivariable functions in geometry 8.9 Extreme value problems for multivariable functions

Chapter 9 Multiple Integrals 9.1 Double integral 9.2 Evaluation of a double integral by iterated integration 9.3 Change of variables in a double integral 9.4 Improper double integrals 9.5 Applications of double integrals 9.6 Extensions to higher dimensions 9.7 Change of variables in a triple integral

Chapter 10 Line Integrals and Surface Integrals 10.1 Line integrals with respect to arc lengths 10.2 Line integrals with respect to coordinates 10.3 Green's theorem, Path independence 10.4 Surface integrals with respect to surface areas 10.5 Surface integrals with respect to coordinates 10.6 The divergence theorem 10.7 Stokes theorem

Chapter 11 Differential Equations 11.1 Differential equations and their solutions 11.2 Separable equations 11.3 Linear first-order equations 11.4 Homogeneous equations 11.5 Exact equations 11.6 Reducible second-order equations 11.7 second-order linear equations
