

<<声子与电子导论INTRODUCTION>>

图书基本信息

书名：<<声子与电子导论INTRODUCTION TO PHONONS AND ELECTRONS>>

13位ISBN编号：9789812384393

10位ISBN编号：9812384391

出版时间：2003-12

出版时间：Penguin

作者：Lou, Liang-Fu

页数：222

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

内容概要

This book focuses on phonons and electrons, which the student needs to learn first in solid state physics. The required quantum theory and statistical physics are derived from scratch. Systematic in structure and tutorial in style, the treatment is filled with detailed mathematical steps and physical interpretations. This approach ensures a self-sufficient content for easier teaching and learning. The objective is to introduce the concepts of phonons and electrons in a more rigorous and yet clearer way, so that the student does not need to relearn them in more advanced courses. Examples are the transition from lattice vibrations to phonons and from free electrons to energy bands. The book can be used as the beginning module of a one-year introductory course on solid state physics, and the instructor will have a chance to choose additional topics. Alternatively, it can be taught as a stand-alone text for building the most-needed foundation in just one semester.

书籍目录

Preface
 Crystal Structure
 1 Introduction and Summary
 1.1 Lattice, Basis, Translation Symmetry, Primitive Lattice Vector, and Primitive Cell
 1.2 Rotation Symmetry
 1.3 Bravais Lattice
 1.4 Honeycomb Structure
 1.5 Cubic Crystals
 1.5.1 Simple cubic (sc) lattice
 1.5.2 Body-centered cubic (bcc) lattice
 1.5.3 Face-centered cubic (fcc) lattice
 1.6 Close-packed Crystals
 1.6.1 Hexagonal close-packed (hcp) structure
 1.6.2 Cubic close-packed (fcc) structure
 1.7 Diamond Structure
 1.8 Wigner-Seitz Cell
 1.9 Beyond Single Crystals
 Problems
 2 Reciprocal Lattice and X-ray Diffraction
 Introduction and Summary
 Reciprocal Lattice
 2.1 A Special Set of Wave Vectors in the k Space
 2.1.1 Examples
 2.2 Lattice Planes, Crystal Directions, and Miller Indices
 X-ray Diffraction
 2.3 Bragg Law
 2.4 Electron Density in Crystal Lattice
 2.5 Diffraction Beam Intensity
 2.6 von Laue's Diffraction Law
 2.7 Brillouin Zones
 2.8 Effects of Electron Distribution around Atoms in the Unit Cell
 2.8.1 Atomic form factor
 2.8.2 Structure factor for the bcc lattice
 2.8.3 Structure factor for the fcc lattice
 Problems
 3 Lattice Vibrations and Phonons
 Introduction and Summary
 Lattice Vibration
 3.1 Equation of Motion in the One Dimensional Lattice
 3.2 Elastic Waves in Continuous Media
 3.3 Waves of Lattice Vibration and the Dispersion Relation $w(k)$
 3.4 Force Constants
 3.5 Long Wavelength Approximation
 3.6 Nearest Neighbor Approximation
 3.7 Phase Velocity and Group Velocity
 3.8 First Brillouin Zone Phonons
 3.9 Difficulties with the Classical Approach
 3.10 Two-body Potential
 3.11 Hamiltonian of Coupled Harmonic Oscillators
 3.12 Periodic Boundary Condition
 3.13 Normal Mode Coordinate- Q_k and P_k in the k Space.....
 4 Thermal Properties of Insulators
 5 Free Electron Fermi Gas
 6 Electron Energy Bands
 Bibliography
 Index
